

WBB - Watertank Board Base Installation

BOARD SIZE: Min: 14"-wide by 24"-tall
Max: 42"-wide by 60"-tall
Max Thickness: 1/4"

1. Unscrew the Bottom Capnuts from the Board Clamps and push them through the side holes of the Base. The Clamps have side tabs to guide and are a **tight fit**. The Board Clamp Screws should face the back of the Base. Screw the Capnuts onto the Clamps on the Base bottom.

2. Remove the Board Clamp Screws and slide your board into both Board Clamps. The board should push down into the slot on top of the Base. Center the board and mark the holes where the Board Clamp Screws go.

3. Remove your board and drill holes on your marks. Replace the board, and screw in the Board Clamp Screws.

4. Unscrew Cap and fill the tank with water.

*Max board height depends on the type of rigid board you are using and the outdoor location's exposure to wind. Boards over 60" are not recommended for outdoor use.
